

Applicati n No.: 10/065,184

D cket No.: JCLA9540

In The Claims:

Claims 1 – 6 (cancelled)

Claim 7. (Current Amended) A display having a plurality of pixels therein for preventing electrostatic discharge, wherein each pixel has a light-emitting device, one major characteristic of the display includes:

a high resistant resistor connecting the anodes of the light-emitting devices in every pair of neighboring pixels, wherein the resistances of the high resistant resistors ~~is~~ are greater than the internal resistances of the light-emitting devices.

Claim 8. (Original) The display of claim 7, wherein the display is an active matrix organic electroluminescence display.

Claim 9. (Original) The display of claim 7, wherein the light-emitting device is an organic light-emitting diode.

Claim 10. (Original) The display of claim 7, wherein the light-emitting device is a polymeric light-emitting diode.
